

How do we know if a
trig equation has an
EXTRANEIOUS SOLUTION ?!?!

Warm-up:

Solve over $[0, 2\pi)$.

$$\cos x \cot x + \cot x = 0$$

$$\cot x (\cos x + 1) = 0$$

$$\cot x = 0$$

$$\frac{\cos x}{\sin x} = 0$$

$$\cos x = 0$$

$$x = \frac{\pi}{2}, \frac{3\pi}{2}$$

$$\cos x + 1 = 0$$

$$\cos x = -1$$

$$x = \pi$$

$$\cot \pi = \frac{-1}{0}$$

undefined!

Select the correct
answer:

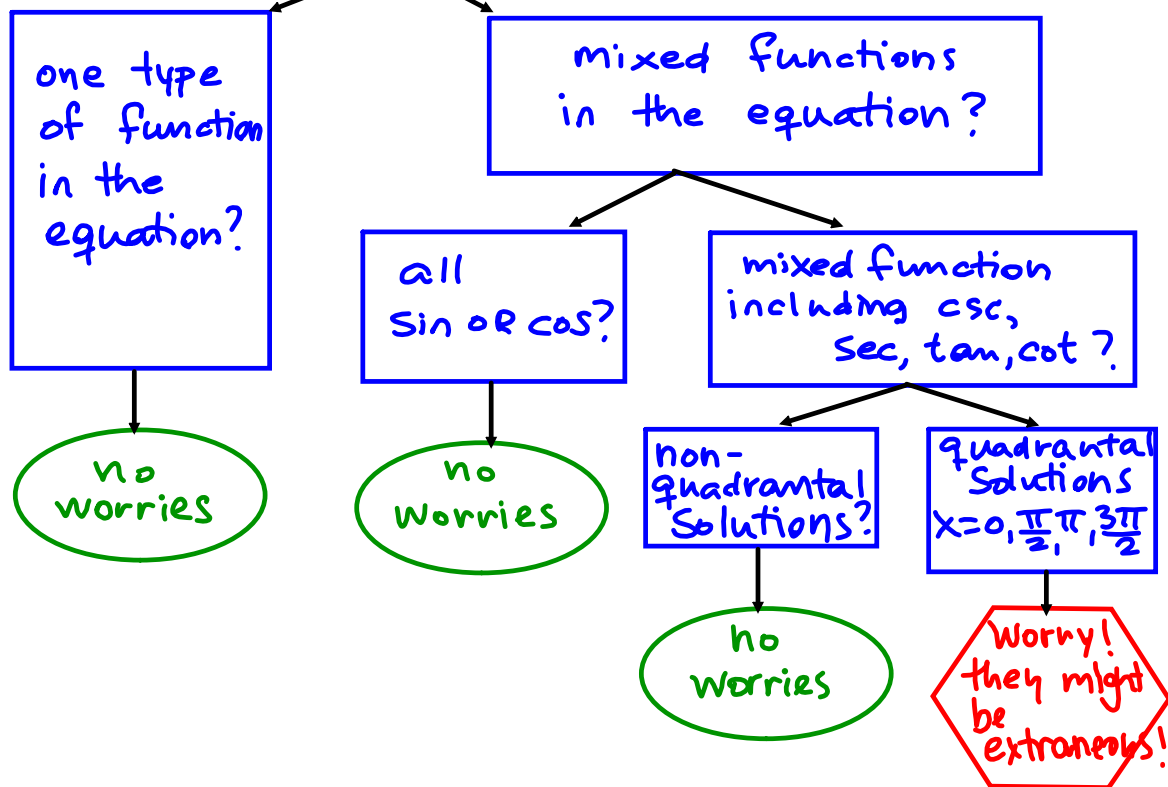

~~A) $\frac{\pi}{2}, \frac{3\pi}{2}$~~

B) $\frac{\pi}{2}, \frac{3\pi}{2}$

C) π

D) none of the
above

Extraneous Solution?

Extra Example:

$$(\cos^2 x - 1)(\cot x + 1) = 0$$

$$\cos^2 x - 1 = 0$$

$$\cos^2 x = 1$$

$$\cos x = \pm 1$$

$$x = 0, \pi$$

$$\cot 0 = \frac{1}{0} = \text{und.}$$

$$\cot \pi = \frac{-1}{0} = \text{und.}$$

$$\cot x + 1 = 0$$

$$\cot x = -1$$

$$\frac{\cos x}{\sin x} = -1 \cdot \sin x$$

$$\cos x = -\sin x$$

$$x = \frac{3\pi}{4}, \frac{7\pi}{4}$$
