- Law of Sines Ambiguous Case ... **SSA**

Use the Law of Sines to find x.

1)

$$\frac{\sin X}{20} = \frac{\sin 29^\circ}{11}$$

$$\sin X = \frac{20 \sin 29^\circ}{11}$$

$$X = \sin^{-1}\left(\frac{20 \sin 29^\circ}{11}\right)$$

$$X = 61.8^\circ$$

2)

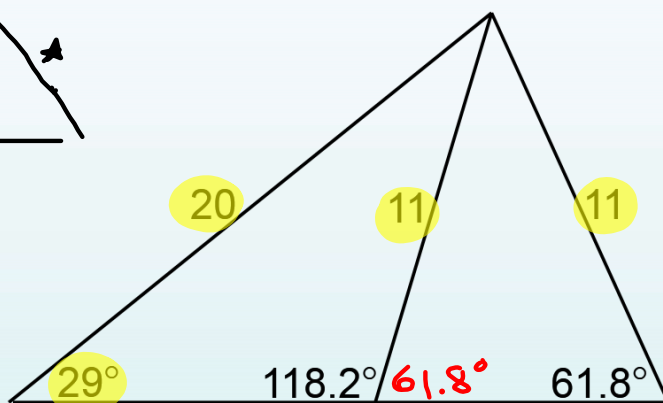

$$\frac{x}{\sin 118.2^\circ} = \frac{11}{\sin 29^\circ}$$

$$x = \frac{11 \sin 118.2^\circ}{\sin 29^\circ}$$

$$x = 20$$

Supplementary

Sometimes ...  
the opposite side won't be long enough to create a triangle!

Other times ...  
the opposite side is longer than the given side, so only one triangle is possible!

Or...  
the opposite side is just the right length to make a right triangle!

SSA

In general ...

Given Angle	Compare Sides	# of solutions
Acute	Opposite > Other	1
★ Acute	Opposite < Other	0,1,2
Obtuse	Opposite > Other	1
Obtuse	Opposite < Other	0

Ex.1: Solve the triangle given

$C = 42^\circ$ ,  $b = 12\text{in}$  and  $c = 22\text{in}$ .

SSA  $\rightarrow$  opp  $>$  other  $\rightarrow$  1  $\triangle$

$$\textcircled{1} \frac{\sin B}{12} = \frac{\sin 42^\circ}{22}$$

$$\sin B = \frac{12 \sin 42^\circ}{22}$$

$$B = 21.4^\circ$$

$$\textcircled{2} A = 180^\circ - 42^\circ - 21.4^\circ$$
$$A = 116.6^\circ$$

$$\textcircled{3} \frac{a}{\sin 116.6^\circ} = \frac{22}{\sin 42^\circ}$$
$$a = \frac{22 \sin 116.6^\circ}{\sin 42^\circ} \rightarrow a = 29.4$$

Ex.2: Solve the triangle give

$A = 85^\circ$ ,  $c = 25\text{in}$  and  $a = 15\text{in}$ .
