

Trig Graphing – WS 2**Sine and Cosine Graphs with all Transformations**

Name _____

Without graphing, describe in words the relationship between each pair of graphs. Include in your explanation differences you might notice in amplitude, period, reflection, vertical shift, phase shift, etc. (Use vocabulary!)

1) $f(x) = \sin x$ and $g(x) = \sin(x - \pi)$

2) $f(x) = \cos x$ and $g(x) = \cos(x + \pi)$

3) $f(x) = \sin x$ and $g(x) = 4 + \sin x$

4) $f(x) = \cos x$ and $g(x) = -6 + \cos 4x$

State the amplitude, period, phase shift and vertical shift of each of the following functions. Then graph one complete period of each, remembering to label the tick divisions on both your horizontal axis and vertical axis. Also state the domain and range of one period using interval notation. ** Remember: $\theta \rightarrow \text{degrees}$ and $x \rightarrow \text{radians}$. **

5) $y = \sin\left(x - \frac{\pi}{4}\right)$

6) $y = 6\cos\left(x + \frac{\pi}{6}\right)$

7) $y = 2\sin(\theta + 90^\circ)$

8) $y = 7\cos 3\theta - 2$

9) $y = 3\sin\left(2x - \frac{\pi}{2}\right) + 2$

10) $y = \sin(3\theta - 90^\circ)$

$$11) \ y = \cos(-x + \pi)$$

$$12) \ y = \frac{1}{2} \cos(3\theta + 180^\circ)$$

$$13) \ y = 4 \sin\left(2x - \frac{\pi}{2}\right) + 2$$

$$14) \ y = -5 \sin\left(\frac{x}{2} + \frac{\pi}{2}\right) - 3$$

$$15) \ y = 2 \cos(4\theta + 180^\circ) + 1$$

$$16) \ y = 3 \sin(8\theta - 720^\circ) - 1$$

$$17) \ y = 2 - 2 \sin\frac{2\pi x}{3}$$

$$18) \ y = 2 \cos x - 3$$

$$19) \ y = \frac{2}{3} \cos\left(\frac{x}{2} - \frac{\pi}{4}\right)$$

$$20) \ y = -3 \cos(6x + \pi) - 2$$
